Re: Del Oro Water Co., Inc., River Island District
Treatment Plant & Conveyance System Project Public Meeting Synopses
Presented by Janice Hanna, Director of Corporate Accounting & Regulatory Affairs

A public meeting was held for all customers to summarize and present the Treatment Plant & Conveyance System Project on February 27, 2018 at 6:30 pm at the River Island Golf Course Clubhouse, located at 31989 River Island Drive in Springville, California. Approximately 50 customers attended, representing 35 households.

Janice Hanna, Director of Corporate Accounting and Regulatory Affairs for Del Oro Water Company (DOWC) conducted the meeting, introducing Jason Coleman, William Gustavson, and Kaleisha Miller of the contracted engineering firm Luhdorff & Scalmanini Consulting Engineers. (LSCE)

Power point presentations were given by LSCE to present the \$5,189,176 mandated Treatment Plant & Conveyance System Project; by DOWC to review of the impact on the customer's bill by DOWC; and a time for everyone to have the opportunity to ask questions. The presentation is attached.

Mr. Coleman & Mr. Gustavson reviewed the water quality issues of the River Island District; how they evaluated and selected the best alternative to improve these issues; and review the design and engineering process of the project. They concluded with the location and cost breakdown.

Ms. Hanna then discussed the Safe Drinking Water Revolving Fund (SRF) process with the State Water Board and how it impacts the customers rates by increasing their monthly bills with an estimated \$67.20 SRF Surcharge.

Finally, the meeting was opened to the public for questions. A list of the questions and our answers are included with this narrative. The questions give a general overview of the customers' concerns regarding the need for and cost of this project.

The 90-minute meeting ended at 8:00 pm.
